

SEWER HOSES

High quality hoses especially designed for cleaning pipes and sewers. A combination of particular characteristics make it unique.

Made of high resistance special rubber with a low coefficient friction.

Reinforced internally with a light weight textile layer, half that of a conventional hose and with better flexibility.

These hose are very durable and resistant. As they are light weight they are very easy to use. Also due to this it's possible to use hoses of a wider diameter therefore lowering the loss of pressure considerably. With the same pressure and flow they can reach longer distances. The nozzle can work at a higher pressure and more flow making them much more efficient and time effective.

- High resistance / Very durable.
- Low friction coefficient.
- Light weight.
- Extremely flexible.
- Comfortable to manipulate.
- Long life.

Ø Inner D1 (Inches)	Thickness (mm)	Ø Outer D2 (mm)	Working pressure (bar)	Burst pressure (bar)	Min. bend radius	Weight (Kg/m)
1/2"	4,25	21,2	300	760	60	0,42
3/4"	6,00	31,0	200	500	100	0,67
1"	7,00	39,0	200	500	130	0,90
1 1/4"	7,50	47,0	150	400	150	1,07
1 1/2"	8,00	34,0	150	400	180	1,40
